A Nowadays, speed reading has become an essential skill in any environment where people have to master a large volume of information. Professional workers need reading skills to help them get through many documents every day, while students under pressure to deal with assignments may feel they have to read more and read faster all the time.

B Although there are various methods to increase reading speed, the trick is deciding what information you want first. For example, if you only want a rough outline of an issue, then you can skim the material quickly and extract key facts. However, if you need to understand every detail in a document, then you must read it slowly enough to understand this.

C A skilled reader will read a lot of words in each block. He or she will only look at each block for an instant and will then move on. Only rarely will the reader's eyes skip back to a previous block of words. This reduces the amount of work that the reader's eyes have to do. It also increases the volume of information that can be taken in over a given period of time.

D On the other hand, a slow reader will spend a lot of time reading small blocks of words. He or she will skip back often, losing the flow and structure of the text, and mudding their overall understanding of the subject. This irregular eye movement quickly makes the reading because they feel it is difficult to concentrate and comprehend written information.

E The best tip anyone can have to improve their reading speed is to practise. In order to do this effectively, a person must be engaged in the material and want to know more. If you find yourself constantly having to re-read the same paragraph, you may want to switch to reading material that grabs your attention. If you enjoy what you are reading, you will make quicker progress.
