

Reading

Exercise 1

Exercise 1: Chọn những đáp án đúng để hoàn thành các đặc điểm về IELTS Reading sau:

Lưu ý: Câu 4,5 có thể chọn nhiều hơn 1 đáp án.

Kỹ năng giúp khoanh vùng vùng thông tin cần tìm kiếm được gọi là ...

- ☐ Skimming
- ☐ Scanning

Kỹ năng yêu cầu đọc chậm để tìm kiếm thông tin chi tiết, cụ thể được gọi là ...

- ☐ Skimming
- ☐ Scanning

Kỹ năng giúp xác định ý chính của đoạn văn là ...

- ☐ Skimming
- ☐ Scanning

PREP.VN

Khi thực hiện Scanning, cần chú ý tới:

- ☐ Từ nối
- ☐ Tên người, con vật, địa điểm
- ☐ Nguyên nhân, lý do
- ☐ Khoảng cách
- ☐ Mốc thời gian
- ☐ Câu kết luận
- ☐ Ý kiến

Khi thực hiện Skimming, cần chú ý tới:

- ☐ Câu chủ đề
- ☐ Các danh từ
- ☐ Câu kết luận
- ☐ Mốc thời gian

☐ Tên riêng

☐ Từ nối

Exercise 2

Exercise 2: Các đặc điểm của dạng câu hỏi MCQs (Multiple Choice Questions) sau là đúng (TRUE) hay sai (FALSE)?

Mỗi câu hỏi sẽ có 3 tới 4 đáp án để lựa chọn	• A. TRUE • B. FALSE
Chúng ta sẽ tìm thấy chính xác các từ khóa của câu hỏi ở trong bài đọc	• A. TRUE • B. FALSE
Nội dung câu hỏi có thể được diễn đạt bằng các từ đồng nghĩa/ trái nghĩa trong bài đọc	• A. TRUE • B. FALSE
Khi xác định Keywords, cần phải chú ý tới lượng từ (many, some, little, ...), trạng từ hội tụ (only, just, mostly, ...) và từ để hỏi (when, how, ...).	• A. TRUE • B. FALSE

Exercise 3

Exercise 3: Nối các từ khóa đồng nghĩa/gần nghĩa với từ IN HOA trong những câu dưới đây.

Lưu ý: Câu câu sau sẽ xuất hiện trong bài Multiple Choices Question. Các bạn hãy chú ý xác định từ đồng/ gần nghĩa thật chính xác để làm bài đọc hiệu quả hơn nhé!

Language learning takes place IN ORDERED STEPS.	adoptees
the RATE at which they acquired language	a gradual process
Language learning takes place EFFECTIVELY.	with full success
What aspect of the ADOPTED CHILDREN's language development differed from that of US-born children?	a faster clip

Exercise 4

WHY DON'T BABIES TALK LIKE ADULTS?

Kids go from 'goo-goo' to talkative one step at a time

Paragraph A. Many people assume children learn to talk by copying what they hear. In other words, they listen to the words adults use and the situations in which they use them and imitate accordingly. Behaviourism, the scientific approach that dominated American cognitive science for the first half of the 20th century, made exactly this argument. However, this 'copycat' theory can't explain why toddlers aren't as conversational as adults.

Paragraph B. Over the past half-century, scientists have settled on two reasonable possibilities. The first of these is called the 'mental-developmental hypothesis'. It states that one-year-olds speak in baby talk because their immature brains can't handle adult speech. The second is called the 'stages-of-language hypothesis', which states that the stages of progress in child speech are necessary stages in language development. A basketball player can't perfect his or her jump shot before learning to (1) jump and (2) shoot. Similarly, children learn to multiply after they have learned to add. This is the order in which children are taught - not the reverse. There's evidence, for instance, that children don't usually begin speaking in two-word sentences until they've learned a certain number of single words. In other words, until they've crossed that linguistic threshold, the word-combination process doesn't get going. [...]

Paragraph C. In 2007, researchers at Harvard University, who were studying the two theories, found a clever way to test them. More than 20,000 internationally adopted children enter the US each year. Many of them no longer hear their birth language after they arrive, and they must learn English more or less the same way infants do - that is, by listening and by trial and error. International adoptees don't take classes or use a dictionary when they are learning their new tongue and most of them don't have a well-developed first language. All of these factors make them an ideal population in which to test these competing hypotheses about how language is learned.

Paragraph D. Neuroscientists Jesse Snedeker, Joy Geren and Carissa Shafro studied the language development of 27 children adopted from China between the ages of two and five years. These children began learning English at an older age than US natives and had more mature brains with which to tackle the task. Even so, just as with American-born infants, their first English sentences consisted of single words and were largely bereft of function words, word endings and verbs. The adoptees then went through the same stages as typical American-born children, albeit at a faster clip. The adoptees and native children started combining words in sentences when their vocabulary reached the same sizes, further suggesting that what matters is not how old you are or how mature your brain is, but the number of words you know.

Paragraph E. This finding - that having more mature brains did not help the adoptees avoid the toddler-talk stage - suggests that babies speak in babytalk not because they have baby brains, but because they have only just started learning and need time to gain enough vocabulary to be able to expand their conversations. Before long, the one-word stage will give way to the two-word stage and so on. Learning how to chat like an adult is a gradual process.

Paragraph F. But this potential answer also raises an even older and more difficult question. Adult immigrants who learn a second language rarely achieve the same proficiency in a foreign language as the average child raised as a native speaker. Researchers have long suspected

there is a 'critical period' for language development, after which it cannot proceed with full success to fluency. Yet we still do not understand this critical period or know why it ends

Exercise 4: You should spend about 20 minutes on Questions 14-18, which are based on Reading Passage 1 below. Choose the correct letter A, B, C or D.

What is the writer's main purpose in paragraph C?

- ☐ A. to give reasons why adopted children were used in the study
- ☐ B. to reject the view that adopted children need two languages
- ☐ C. to argue that culture affects the way children learn a language
- ☐ D. to justify a particular approach to language learning

Snedeker, Geren and Shafto based their study on children who

- ☐ A. were finding it difficult to learn English.
- ☐ B. had come from a number of language backgrounds.
- ☐ C. were learning English at a later age than US children.
- ☐ D. had taken English lessons in China.

What aspect of the adopted children's language development differed from that of US-born children?

- ☐ A. their first words
- ☐ B. the way they learnt English
- ☐ C. the rate at which they acquired language
- ☐ D. the point at which they started producing sentences

What did the Harvard finding show?

- ☐ A. Not all toddlers use babytalk.
- ☐ B. Language learning takes place in ordered steps.
- ☐ C. Some children need more conversation than others.
- ☐ D. Not all brains work in the same way.

When the writer says 'critical period', he means a period when

- ☐ A. studies produce useful results.

- ☐ B. adults need to be taught like children.
 - ☐ C. immigrants want to learn another language.
 - ☐ D. language learning takes place effectively.
